1 · Overview

ZLDR Events is a read-only event viewer for members of the ZLDR (Zwift Long Distance Runners and Riders) community. It shows all upcoming ZLDR cycling and running events directly from Zwift, in one place, without needing to hunt through the Zwift Companion app or website.

The app displays:

- All upcoming **ZLDR running and cycling events** — group rides, races, time trials, workouts
- Full event details — date, time, route, distance, duration, categories, and sign-up counts
- Your **registered events** highlighted in gold across the event list and Calendar

- A **Calendar view** — Month, Week, and Agenda layouts with a resizable event panel
- **Event reminders** — local notifications before each event you're registered for
- **Calendar sync** — automatically adds your registered events to your device calendar
- Direct links to **join on Zwift** and view results on **ZwiftPower**

Read-only viewer: ZLDR Events does not join events, modify your Zwift profile, or store any personal data beyond your login tokens. Your Zwift credentials are used only to authenticate with the Zwift API.

What you need

- An Android device running Android 8.0 (Oreo) or later
- A Zwift account (your usual Zwift username/email and password)
- An internet connection when opening or refreshing the app

2 · Signing In

The first time you open ZLDR Events you will see the sign-in screen. Enter the same username (or email address) and password you use to log in to Zwift.

Sign-in screen

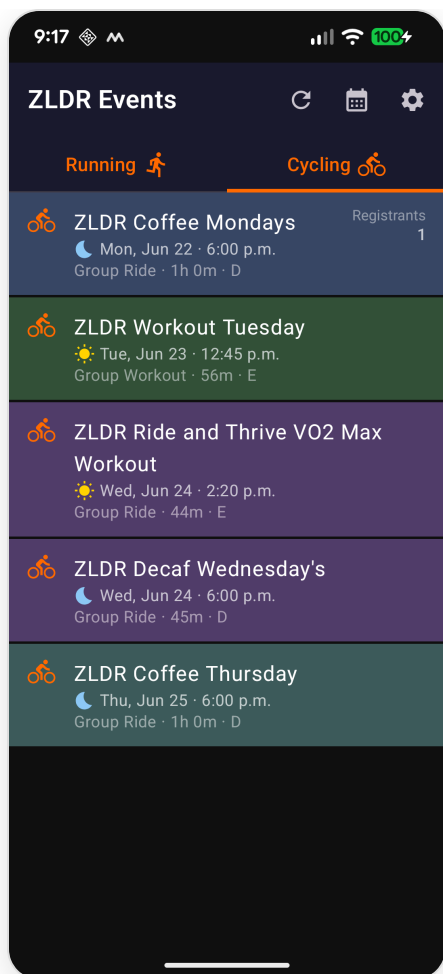

Field	What to enter
Zwift username or email	Your Zwift login name or the email address linked to your account
Password	Your Zwift password — tap the eye icon to show/hide

Tap **Sign in** when ready. A spinner appears while the app authenticates. If credentials are incorrect an error message is shown beneath the password field — check for typos and try again.

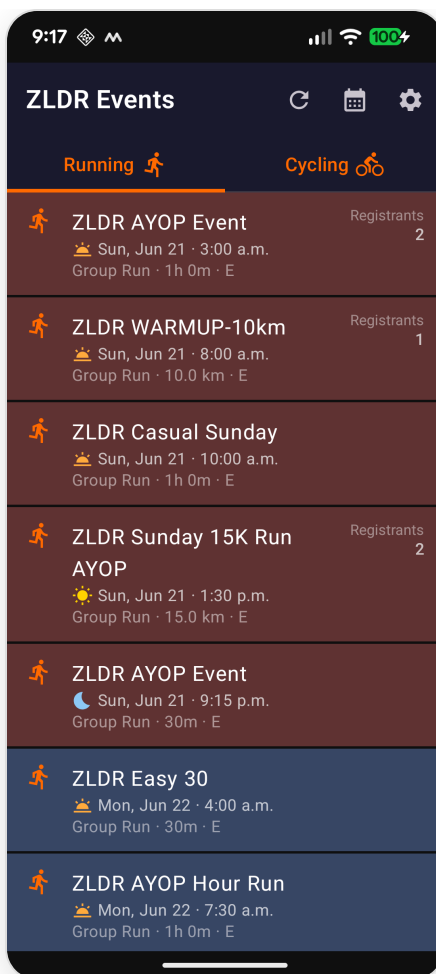

Staying signed in: Once signed in, your session is kept automatically. You will only need to sign in again if you tap *Log Out* in Settings, or if your session expires.

3 · Browsing Events

After signing in you land on the main events screen. Two tabs — **Cycling** and **Running** — show upcoming ZLDR events for each sport.

Cycling tab — upcoming ZLDR cycling events

Running tab — upcoming ZLDR running events

Switching tabs

Tap **Cycling** or **Running** in the tab bar to switch between sports. Each tab scrolls independently and remembers your scroll position when you navigate back from an event detail.

Event list items

Each row shows:

- **Event name** — the full ZLDR event title
- **Date & time** — in your local timezone, with a time-of-day icon:
 -  Amber — morning (before noon)
 -  Yellow — afternoon (noon–6 pm)
 -  Blue — evening (after 6 pm)
- **Event type** — Group Ride, Race, Time Trial, Group Workout, etc.
- **Distance / duration** — kilometres or minutes where available
- **Route name** — the Zwift world route (when provided)

- **Categories** —
A/B/C/D/E labels if
the event has
separate pens
- **Sign-up count** —
number of
participants
registered (top-right
corner)

Registered events

Events you are signed up for are highlighted with a **gold** border and a checkmark badge in the top-right corner. The sign-up count is also shown with a *Registered* label above it. This lets you spot your events at a glance without scrolling through the full list.

Refreshing the list

Tap the **refresh icon** (↻) in the top-right of the app bar to reload events from Zwift. A spinner replaces the icon while loading. The app also fetches fresh data automatically each time you return to the foreground.

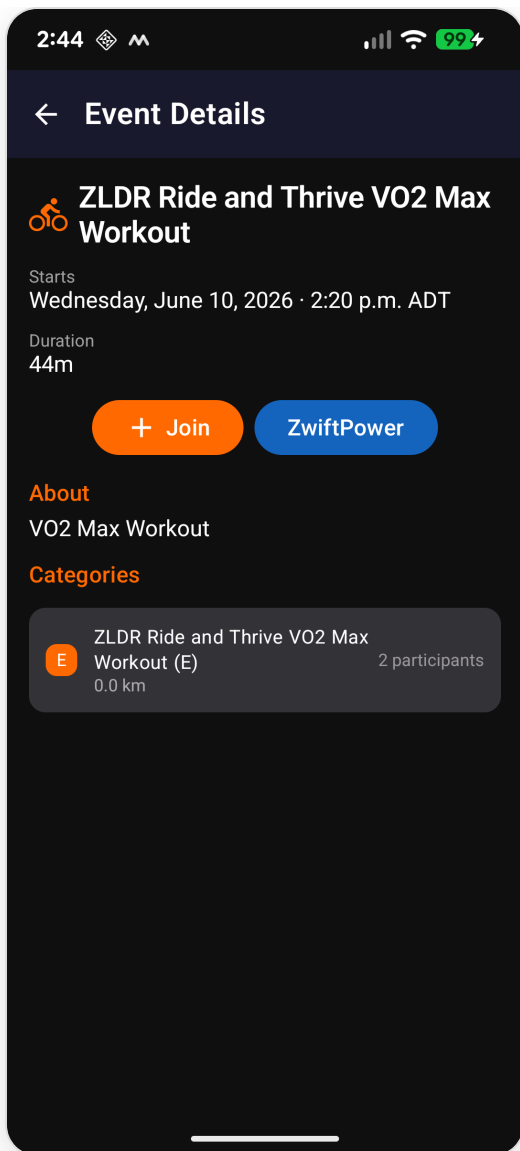

Opening the Calendar

Tap the **calendar icon** in the top bar (left of the settings icon) to open the Calendar screen. See

Section 5 · Calendar for
full details.

4 · Event Details

Tap any event in the list to open its full detail screen.

Event detail — date, duration, action buttons, description, and categories

What's shown

Field	Description
Event name & sport icon	Full title with cycling or running icon
Starts	Full date, time, and local timezone
Route	Zwift world and route name (when available)
Distance / Duration	Kilometres, laps, or timed format as applicable
About	Event description from the organiser
Categories	Each pen (A/B/C/D/E) shown as a card with distance and participant count

Registered indicator

If you are signed up for the event, a **✓ Registered** badge appears at the top of the detail screen.

Action buttons

+ Join Opens the event registration page on **zwift.com** in your browser. You will need to be signed in to Zwift on the website or in the Companion app to complete sign-up.

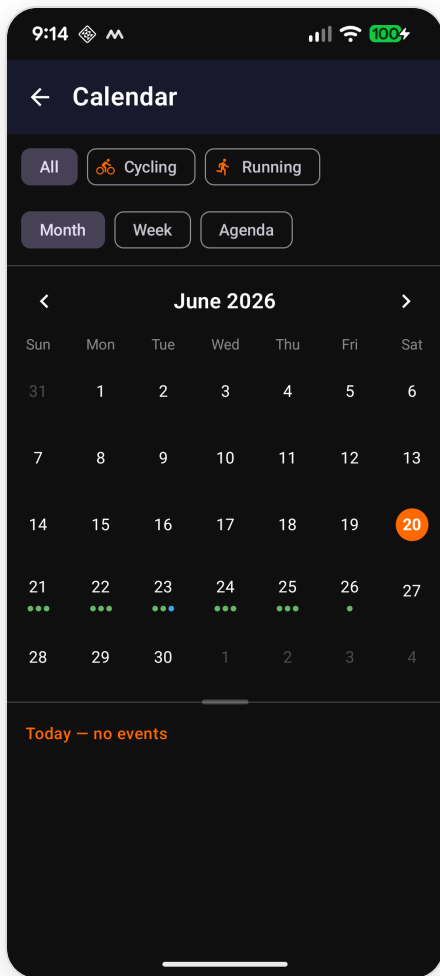

ZwiftPower Opens the event on **zwiftpower.com** in your browser, where you can view category results, rankings, and historical finisher data.

Going back

Tap the **back arrow** (←) in the top-left to return to the events list. Your scroll position in the list is preserved.

5 • Calendar

The Calendar screen gives you a visual overview of all upcoming ZLDR events. Tap the **calendar icon** in the events screen top bar to open it.

Month view — events shown as dots, registered events in gold

View modes

Three view modes are available via the chip bar at the top of the screen:

- **Month** — full calendar grid with event dots on each day
- **Week** — a 7-day strip with the selected day's events listed below
- **Agenda** — a chronological list of all upcoming events grouped by date

The separator position you set in Month or Week view is remembered independently for each — switching to Agenda and back will restore your last position.

Sport filter

The **All / Cycling / Running** chips at the top of the screen filter which events are shown across all three views.

Registered event highlighting

Events you are signed up for stand out in **gold** throughout the Calendar:

- **Month view** — gold dot on the date cell
- **Week view** — gold dot below the day number
- **Event rows** — gold border around the event row and a ✓ checkmark icon

Navigating months and weeks

In **Month** view, tap the < and > arrows beside the month name to move between months. Tap any date to select it and see that day's events in the panel below.

In **Week** view, tap the arrows beside the week range to move between weeks. Tap any day in the strip to see its events below.

Draggable separator

In Month and Week views, a horizontal separator divides the calendar grid (top) from the event list (bottom). Drag the **pill-shaped handle** up or down to resize the panels to your preference. The position is saved independently for each view mode, so it is restored when you switch back.

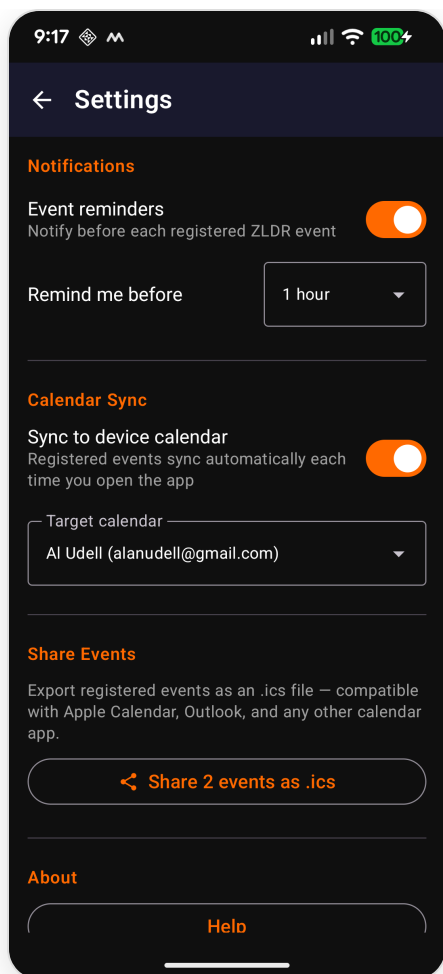

Agenda view

The Agenda view shows all upcoming events in a scrollable chronological list, with sticky date headers. It is the fastest way to read event names and times without navigating between dates. The sport filter applies here too.

Auto-refresh: When you return to the app from Zwift — for example, after registering for an event — the calendar data refreshes automatically. Registered events appear highlighted without needing to tap Refresh.

6 · Settings

Tap the **settings icon** (⚙) in the top-right of the main screen to open Settings.

Settings — Notifications, Calendar Sync, Share Events, About, Account, and Cache

Notifications section

Event reminders — When enabled, you receive a local notification before each ZLDR event you are registered for. Toggle the switch to turn reminders on or off.

Remind me before — Choose how far in advance to be notified: options range from 5 minutes up to 1 week. This setting appears when reminders are enabled.

Permission note: On Android 13 and above, the app will request notification permission the first time you enable reminders. If you previously denied the permission, go to your device's *Settings* → *Apps* → *ZLDR Events* → *Notifications* to grant it.

Calendar Sync section

Sync to device calendar — When enabled, all events you are registered for are automatically added to your chosen device calendar each time you open the app. Events you unregister from are removed on the next sync.

Target calendar — A dropdown appears when sync is enabled, listing all writable calendars on your device. Select the calendar where ZLDR events should be added.

Permission note: Calendar sync requires Read Calendar and Write Calendar permissions. The app will

prompt for these the first time you enable the toggle.

Google Calendar tip: After the first sync, you may need to swipe away and relaunch the Google Calendar app for new events to appear. Subsequent syncs update immediately.

Share Events section

Share as .ics — Exports all your registered events as an iCalendar (.ics) file and opens your device's share sheet. The file is compatible with Apple Calendar, Outlook, Google Calendar, and any other calendar app that supports the iCalendar format.

The button is disabled if you have no registered events.

About section

Help — Opens a quick-reference dialog covering the events screen, Calendar, event detail, and Settings.

About — Shows the installed app version, build date, links to the GitHub project and this user guide, and a note about the unofficial Zwift API dependency.

Zwift Account section

Signed in as — Displays the Zwift username associated with your current session.

Log Out — Signs you out and returns to the sign-in screen. A confirmation dialog is shown first. You will need to

enter your Zwift credentials again to use the app.

Cache section

Clear Cached Data — Removes all locally cached events from the device. The list will reload from Zwift on the next refresh. Use this if event data appears stale or incorrect. A confirmation dialog is shown first.

Note: Clearing cached data does not log you out. Your sign-in session is kept and the app will re-fetch events automatically.

7 · Tips & Notes

Event timing

All event times are displayed in your device's local timezone. If you travel to a different timezone, the times will automatically reflect the change when you next open the app.

Why some events show 0.0 km

Some ZLDR events — particularly group workouts and structured training sessions — do not have a fixed route distance. Zwift publishes these with a distance of zero; this is expected and not an app issue.

Missing events

If a ZLDR event you expect to see is not listed, try tapping **Refresh** (↻). If it still doesn't appear, the event may not yet be published on Zwift's public feed, or it may be listed under the other sport tab.

Registered events not syncing to calendar

Calendar sync runs automatically each time the app opens. If a recently registered event has not appeared in your device calendar, try closing and reopening ZLDR Events. After the first sync, you may also need to relaunch the Google Calendar app for events to appear.

Joining events

ZLDR Events is a viewer only. To register for an event, tap **+ Join** on the detail screen — this opens Zwift's website where you can complete sign-up. You can also join directly from the Zwift app or Companion app.

Session expiry

Zwift access tokens expire periodically. The app refreshes them automatically in the background. On rare occasions the session may fully expire, in which case you will be returned to the sign-in screen. Simply sign in again to continue.

Internet connection

An internet connection is required to load or refresh events. Cached data from the last successful load is shown when offline, but the list will not update until connectivity is restored and you tap Refresh.

ZLDR Events v1.3.0 · Developed by Alan Udell for the ZLDR community · June 2026

This app uses unofficial Zwift APIs that are not officially supported by Zwift, Inc.
